

Unfortunately I had less time than I had hoped, and the data provided was not following the typical NHL API data format. That being said it was a fun exercise and I want to thank you for putting this together, and I am looking forward to see what other put together!

I created a dashboard in Tableau showing shot locations in 2D and 3D, as well as passes per player. This could evolve further in a more advanced interactive dashboard, but as mentioned I had not enough time between this and attending a baseball analytics conference. My bad!

Interestingly when looking at shooting percentage resulting in goals I found it interesting that the percentage of shots ending up as goals while shorthanded is higher than when at even strength or on powerplay!

Cheers!

RJ
